Title:

Converting yesterday's money to 2005's – the maxium limit is checked only during the first conversion

Description:

Go to http://www.nationalarchives.gov.uk/currency/default0.asp#mid and look at the second section (Find out how much yesterday's (1971-2005) money was worth in 2005).
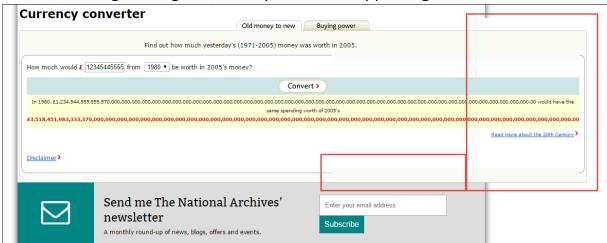

When trying to put a lot of numbers into to Pounds field, it is limited to 20 digits/characters. Leave the maximum number of digits there and click 'Convert'.

You are navigated to another screen, the preciously given value is still displayed in the Pounds field, BUT there is possibility to add more characters here.

1. When non-number characters are given there, during conversion the value is treated as null/zero:

2. When more digits are given, the layout is not supporting it:

And when 310 digits are given, the number is treated as null/zero:

How much would £ 1111111111111 from 1980 ▼ be worth in 2005's money?

1111111111111111111111111111111

Convert >

In 1980, £ would have the same spending worth of 2005's **£0.00**

And here is the 310 digits I've used:

1215683887281314214452673432334432444444444444444444444444
444444444444444444444444444444444444444444444444444444444444
444441233333333333333333333333333333333333333333333333333333
333333333333333332222222222222222222222222222222222222222222
222222222222222222222222222221111111111111111111111111111111
11111111111111111111

It should be consistent on both screens to limit the provided values.
